Subject: Arkema and Data management activities

Arkema

On behalf of the OSC, the REOC continues to work with IMAAC on modeling of anticipated future releases at the site. The modeling products are being delivered to Unified Command. Continued to facilitate the dissemination of data and information to support the Unified Command for the Arkema ER. ASPECT continues to fly missions over the facility every 30 minutes. The latest data collected over the facility (1430) continues to show low detections of peroxide. Limited data (satellite limitations) was pulled from the aircraft and spectral analysis is indicating peroxide. These detections were made about 200 meters downwind of the plant.

Data management

Continue to support operations (generating RNA Maps, Data Entry, and GIS) in Corpus Christi and Houston/Crosby. Continue to coordinate with and support the TCEQ/EPA DW and WWTP teams with their assessment operations. Continue to work with the Remedial Branch on NPL assessment activities. Continue to work with Documentation Unit to implement a file sharing mechanism for the response. Continue to work with the PIO on a public information strategy that shows EPA resources deployed and the status of NPL Sites in the impacted areas.
